## **Microeconomics**

The fifth edition of ECONOMIC CONCEPTS AND APPLICATIONS continues to echo the great nineteenth-century economist, Alfred Marshall, who said that economics is 'a study of mankind in the ordinary business of life'. Economics, at its core, is about making decisions: the course of study chosen by a student; the job chosen by a job seeker; the goods purchased by a consumer; the crops planted by a farmer; the pricing decisions of a producer; a government's decision to raise or lower taxes - all are economic decisions and have economic consequences. Some decisions have little impact on the economy, while others can have a global impact. This text aims to help the reader apply economic concepts and models to the real world. The fifth edition of this popular textbook covers economic concepts, theories and models required by students of introductory economics courses. The author seeks to show students how economic tools can be used to understand the economic forces present in our daily lives. Global warming and globalisation are examples of

contemporary issues raised for discussion. The text has a clear flow of essential economic principles and uses appendices to elaborate on more technical content.

### **Global Economic Crisis**

## **Macroeconomics, International Edition**

Agrarian Change and Crisis in Europe, 1200-1500 addresses one of the classic subjects on economic history: the process of aggregate economic growth and the crisis that engulfed the European continent during the late Middle Ages. This was not an ordinary crisis. During the period 1200-1500, Europe witnessed endemic episodes of famine and a wave of plague epidemics that amounted to one of its worst health crises, rivaled only by the Justinian plague in the sixth century. These challenges called into question the production of goods and services and the distribution of wealth, opening the possibility of fundamental systemic change. This book offers an empirical synthesis on a host of economic, demographic, and technological developments which characterized the period 1200-1500. It covers virtually the entire continent and places equal emphasis both on providing a solid factual framework and comparing and contrasting various theoretical interpretations. The broad geographical and conceptual scope of the book renders it indispensable not only for undergraduate students who take courses relating to the economic and social life of the Middle Ages but also to more advanced scholars who often specialize in only one country or region.

### **Economics**

John Maynard Keynes failed to correctly interpret classic economic concepts, and dismissed the classical explanations and conclusions as being irrelevant to the world in which we live. The trauma of the Great Depression and Keynes's changed definition of economic concepts, aided by Eugen Böhm-Bawerk, have made it difficult for modern economists to fully appreciate the classical insights. This

outstanding book clarifies the classical explanations to resolve the continuing theoretical and policy disputes. Key chapters include: On the Definition of Money Keynes's Misinterpretation of the Classical Theory of Interest The Classical Theory of Growth and Keynes's Paradox of Thrift The Mythology of the Keynesian Multiplier This unique book demonstrates that it is Keynes's understanding of some fundamental classical economic concepts which is at fault, and extends its analysis to other modern contributions in macroeconomics.

### **Principles Of Microeconomics, 5Th Ed**

The General Theory of Employment, Interest, and Money, written by legendary author John Maynard Keynes is widely considered to be one of the top 100 greatest books of all time. This masterpiece was published right after the Great Depression. It sought to bring about a revolution, commonly referred to as the ‘Keynesian Revolution’, in the way economists thought—especially challenging the proposition that a market economy tends naturally to restore itself to full employment on its own. Regarded widely as the cornerstone of Keynesian thought, this book challenged the established classical economics and introduced new concepts. ‘The General Theory of Employment, Interest, and Money’ transformed economics and changed the face of modern macroeconomics. Keynes’ argument is based on the idea that the level of employment is not determined by the price of labour, but by the spending of money. It gave way to an entirely new approach where

employment, inflation and the market economy are concerned.

This textbook covers the syllabus of the papers on economy, state and society of undergraduate and postgraduate courses in Economics in India. It also covers the topics under the paper on history of economic thought taught in some colleges/universities. The book explains the emergence, evolution and working of the capitalist system with the help of some of the major principles and theories of economics, both mainstream and heterodox. It interrelates economics and economic life with other aspects of our lives—social, cultural, political, religious and intellectual. This book departs from the traditional analysis of the capitalist system in integrating the real sector of the economy with its monetary sector, and carries forward Keynes' analysis. It combines Keynesian and Marxian approaches to the subject and emphasises the dialectical unfolding of life that underlies the interrelation between the economy, state and society. It underlines that the capitalist system is constantly changing, propelled by the tendency towards increasing concentration of ownership and control of the means of production in fewer and fewer hands. The book comes with an Instructor's Manual to aid the teaching of the subject.

The mainstream agri-food system in Thailand has been shaped to aid capital accumulation by domestic and transnational hegemonic forces, and is currently sustained through hegemonic agri-food production-distribution, governance structures and ideational order. However, sustainable agriculture and land reform movements have to certain extents managed to offer alternatives. This book adopts a neo-Marxist and Gramscian approach to studying the political economy of the agricultural and food system in Thailand (1990-2014). The author argues that

hegemonic forces have many measures to co-opt dissent into hegemonic structures, and that counter-hegemony should be seen as an ongoing process over a long period of time where predominantly counter-hegemonic forces, constrained by political economic structural conditions, may at times retain some hegemonic elements. Contrary to what some academic studies suggest, the author argues that localist-inspired social movements in Thailand are not insular and anti-globalisation. Instead, they are selective in fostering collaborations and globalisation based on values such as sustainability, fairness and partnership. Providing new perspectives on polarised politics in Thailand, particularly how cross-class alliances can further or frustrate counter-hegemonic movements, the book points to the importance of analysing social movements in relation to established political authority. It will be of interest to academics in the field of Politics and International Relations, Sociology, Development Studies and Asian Studies.
